

Abstract

Good!

Introduction

Add citations for application/ SMLP/GHUM

How does LBS stand for?

Good!

Related work

Add citations + you use Guan et.al but default format for citation is number.

Good!

Method

Add visualization of the SMLP model

I'm not in the field of 3D models. So it's hard to understand all the mathematics. I'd recommend add some images like in the presentation.

Experimental Results

From plot it looks like that the model doesn't converge

I'd like to see some examples of model results

Code

The official version of COAP has been released. So the reproducibility point is not actual. As the paper try to reproduct the original results.
